PREFACE

Environmental Assistance Group (EAG) was retained by the ANTELOPE VALLEY COLLEGE (AVC) to conduct a three-year re-inspection in accordance with AHERA (Asbestos Hazard Emergency Response Act) for the presence of asbestos-containing materials (ACM) at the site.

The intent of the survey was to locate, quantify, and assess the present condition of ACM throughout all buildings either leased or owned by AVC at all sites.

All field inspection and sampling data has been put in a Three-Year Reinspection Report

Suspect ACM was identified in many buildings and confirmed as indicated in the enclosed inspection reports. These findings can easily be referenced in the report.

Any further questions in regard to this report or Response Actions being taken by ANTELOPE VALLEY COLLEGE (AVC) should be directed to the Health and Safety Office at AVC.

The AVC has determined that employees will not disturb ACM.

Much of the Operations and Maintenance Plan in Volume II will not be enacted unless the AVC policy on utilizing outside contractors to remove asbestos containing materials is amended.

2018 ASBESTOS 3 YEAR RE-INSPECTION REPORTS
